Preface	i
List of examples	xix
<b>1 LISREL models and methods</b>	<b>1</b>
1.1 The general LISREL model	1
Assumptions	2
The covariance matrix of the observations as implied by the LISREL model	3
Fixed, free, and constrained parameters	3
LISREL notation for numbers of variables	3
1.2 Path diagrams and the LISREL equations	4
Equations for the path diagram	5
1.3 LISREL submodels	8
The measurement (factor analysis) model for $x$ ( $NX \neq 0$ ; $NK \neq 0$ )	9
Structural equation model where $y$ and $x$ are observed without error ( $NY \neq 0$ ; $NX \neq 0$ )	9
Errors in $y$ -variables only ( $NY \neq 0$ ; $NE \neq 0$ ; $NK \neq 0$ )	9
No $x$ -variables ( $NY \neq 0$ ; $NE \neq 0$ )	10
Summary of LISREL submodels	11
Default values for parameter matrices	11
1.4 LISREL notation for specifying free, fixed, and constrained parameters	12
Specification of fixed and free elements	13
Specification of equality constraints	14
Specification of non-zero fixed parameters	14
1.5 Kinds of input data and type of moment matrix to be analyzed	14
1.6 PRELIS	15
1.7 Methods of estimation	17
Instrumental variables (IV) and two-stage least squares (TSLS)	17
Unweighted least squares (ULS)	20
Generalized least squares (GLS)	20
Maximum likelihood (ML)	20
Generally weighted least-squares (WLS)	21
Diagonally weighted least-squares (DWLS)	23
The ridge option in LISREL 7	24
The information matrix	24
Admissibility of the estimates	25
1.8 Evaluation of the LISREL solution	25
Standard errors and correlations of estimates	26
Variation accounted for	26
Goodness-of-fit measures	27
Root mean squared residual	30
Residuals	30
Model-modification indices	31
1.9 Standardized solutions	32
1.10 Direct, indirect, and total effects	33
1.11 Covariances among all LISREL variables	34
1.12 Analysis of correlation matrices	35

<b>2</b>	<b>The LISREL problem run</b>	<b>37</b>
2.1	Preparing the LISREL command file	37
	Commands	37
	Detail lines	38
	FORTRAN format statements in the command file	38
	Rules for line length	40
	Stacked problems	41
	Order of commands	43
	Title    Title	43
	DA    Data and problem parameters	44
	LA    Labels	46
	RA    Raw data	49
	CM,KM,MM,OM,PM,RM,TM    Summary data	52
	ME,SD Means and standard deviations	56
	AC    Asymptotic covariance matrix	58
	WM    Weight matrix	59
	AV    Asymptotic variances	61
	DM    User-specified diagonal weight matrix	62
	SE    Select and reorder variables	63
	MO    Model parameters	64
	LE,LK Labels for latent variables	68
	FI,FR Fix or free matrix elements	70
	EQ    Simple equality constraints	72
	CO    Complex equality constraints	73
	IR    Interval restrictions	75
	PA    Pattern matrix	76
	VA,ST Fixed values and starting values	80
	MA    Matrix values	83
	PL    Plots	85
	NF    No modification index (never free)	87
	PD    Path diagram	89
	OU    Output requests (1)	90
	OU    Output requests (2)	92
	OU    Output requests (3)	94
	OU    Output requests (4)	95
2.2	An annotated example of LISREL input and output	97
	Input	97
	Output	100
<b>3</b>	<b>Submodel 1: Measurement models and confirmatory factor analysis</b>	<b>123</b>
3.1	The one-factor congeneric measurement model	124
3.2	Several sets of congeneric measures: the multi-factor model	129
	Example 3.2: Ability and aspiration	130
3.3	Confirmatory factor analysis	138
<b>4</b>	<b>Submodel 2: Causal models for directly observed variables</b>	<b>143</b>
4.1	Regression models	146
	A single regression equation	146
	Stepwise regression	149
	Analysis of variance and covariance	151
	Multivariate regression	155

4.2	Path analysis	158
4.3	Econometric models	164
<b>5</b>	<b>Structural equation models for latent variables</b>	<b>171</b>
5.1	The full LISREL model	171
5.2	Measurement errors in regression models	172
5.3	Measurement errors in path analysis	180
5.4	MIMIC models	185
5.5	Path analysis with latent variables	188
<b>6</b>	<b>The LISREL submodel 3</b>	
6.1	A model for tests that differ in length only	203
6.2	Second-order factor analysis	205
6.3	Variance and covariance components	208
6.4	Two-wave models	213
6.5	Smplex models	230
<b>7</b>	<b>Analysis of ordinal and other non-normal variables</b>	<b>239</b>
7.1	Analysis of ordinal variables	240
7.2	Factor analysis of dichotomous variables	248
7.3	Analysis of continuous non-normal variables	250
7.4	Estimating a correlation structure with WLS	254
<b>8</b>	<b>Miscellaneous topics</b>	<b>259</b>
8.1	Constraints	259
	Constraining error variances to be non-negative	259
	Constraining covariance matrices to be non-negative definite	265
8.2	Tests of hypotheses and power calculation	265
8.3	Equivalent models	271
	How can equivalent models be recognized?	272
	Specification searches	274
<b>9</b>	<b>Multi-sample analysis</b>	<b>277</b>
9.1	Analysis based on covariance matrices	277
9.2	Command file for multi-sample analysis	280
9.3	Standardized solutions in multi-sample analysis	290
<b>10</b>	<b>LISREL with mean structures</b>	<b>297</b>
10.1	The extended LISREL model	297
10.2	Estimation of factor means	299
10.3	Incomplete data problems	310
10.4	Growth Curves	313
<b>11</b>	<b>Hints on resolving problem cases</b>	<b>321</b>
<b>A</b>	<b>New features in LISREL 8</b>	<b>333</b>
A.1	New command language	333
A.2	Compatibility with LISREL 7	335
	Input	335
	Output	336
A.3	An extension of the LISREL model	337
A.4	Scaling the latent variables	339
A.5	Unconstrained x	341

A.6	Goodness-of-fit statistics	341
A.7	Simplified pattern matrices for equality constraints	343
A.8	Standardized effects	344
A.9	Linear and non-linear constraints	345
A.10	General covariance structures	347
A.11	Interval restrictions	348
<b>B</b>	<b>Syntax overview</b>	<b>351</b>
B.1	LISREL syntax diagram	353
	Input specification commands	353
	Model specification commands	354
	Output specification commands	356
B.2	Notation	357
	<b>References</b>	<b>359</b>
	<b>Author Index</b>	<b>369</b>
	<b>Subject Index</b>	<b>371</b>
